ProofHire

Milestone escrow across chains: accept work on Ethereum Sepolia, lock capital & reputation on Creditcoin — Attestcoin is the only bridge.

Attestcoin-native

Sameer Bhatt / Agent Money

Sepolia live

CC3 vault pending faucet

PROBLEM

Platforms are still the oracle

TODAY

- Freelance / agent payouts settle on platform trust
- Clients live on Ethereum; credit rails live elsewhere
- Escrow backends can lie about “acceptance”
- Reputation is off-chain and gameable

NEEDED

- Acceptance as a verifiable on-chain fact
- Capital release only after cryptographic proof
- Creditcoin reputation from proved work, not scores
- No centralized settlement operator

Clients on Ethereum · credit & escrow on Creditcoin · no shared trust root without Attestcoin.

SOLUTION

ProofHire: escrow CTC · accept on Sepolia · Attestcoin settles

WHY ATTESTCOIN IS CORE

Integration depth — not a wrapper

In-transaction verify

Payout path calls BlockProver precompile 0xFD2 inside the Creditcoin tx via ASCBase (@gluwa/asc-contracts).

ASCBase dedupe

Query already processed → replay fails. Escrow cannot be double-spent from the same attested source tx.

EvmV1Decoder binding

Receipt status + event checks: emitter allowlist, job/worker binding, receiptStatus == 1.

USC ProofBuilder

Readability worker: wait attestation → ProofBuilder.getProof → vault.execute (@gluwa/usc-sdk).

Cite: docs.attestcoin.org · dApp Builder Infrastructure (Source SC / Worker / ASC / Logic)

ARCHITECTURE**Official Attestcoin dApp Builder shape****1 • SOURCE SC****AcceptanceRegistry (Sepolia)**

Emits MilestoneAccepted — the attested fact.

2 • READABILITY WORKER**TypeScript + USC SDK**

waitUntilHeightAttested → proofs → call ASC.

3 • ASC**ProofHireVault extends ASCBase**

verifyAndEmit at BlockProver 0xFD2.

4 • BUSINESS LOGIC**Release + reputation**

Same contract: pay worker CTC, increment proved-work reputation.

Without Attestcoin: backend tells Creditcoin “accepted.” With it: Merkle + continuity inclusion proof required in the payout tx.

DEPLOYMENT STATUS

Sepolia live · Creditcoin vault pending faucet

COMPONENT	NETWORK	STATUS	ADDRESS / NOTE
AcceptanceRegistry	Sepolia	Live	0x46F8A74A0F64Da7D778645e9Aa1f6116500213e6
ProofHireVault	CC3 testnet	Pending	Awaiting Discord CTC faucet
forge build / tests	—	Pass	AcceptanceRegistry tests green; via_ir for EvmV1Decoder

Sepolia: 0x46F8A74A0F64Da7D778645e9Aa1f6116500213e6

Deployer 0x36ad...4989 · Deploy tx 0x0f3af57c...a47f · No fabricated metrics.

DEMO FLOW · ≤ 3 MIN

From escrow lock to proved payout

0:00 - 0:50**Hook + openJob**

Trust problem → lock CTC escrow on Creditcoin (Blockscout).

0:50 - 1:20**acceptMilestone**

Show delivery artifact → Sepolia MilestoneAccepted log on live registry.

1:20 - 2:40**Prove · settle · replay**

Attestcoin proof → 0xFD2 verify → payout + reputation → replay fails.

Wedge

Primary: AI agent / human milestone hiring for Agent Money. Stretch: freelance milestones, sponsorship authenticity. Secondary DeFi escrow + attested work-credit rail (CEIP).

TEAM

Builder & agent

HUMAN · LEAD**Sameer Bhatt**

Project lead, DoraHacks registration / KYC, faucet & submission owner. Hackathon builder of record.

AGENT · ENGINEERING**Money (Agent Money)**

Contracts, worker, demo, Attestcoin integration scaffolding, testnet Sepolia deploy, docs & pitch artifacts.

Track: AI (primary)

MIT app logic

Gluwa packages: upstream licenses

THE ASK**Deepest Attestcoin use + CEIP work-credit rail**

**Judge us on Attestcoin utilization depth: Source SC
→ USC proofs → ASCBase / 0xFD2 in-tx verify →
escrow + reputation — not a side quest.**

What ships now

- Live Sepolia AcceptanceRegistry
- Vault + worker scaffold on ASC / USC
- Foundry tests green; architecture docs

What we want

- Recognition for core Attestcoin path
- CEIP fast-track: attested work → credit
- CC3 faucet unlock to finish live loop
